

CLAIMS:

1-3 (Canceled).

4. (Currently amended) A method of yielding ~~making~~ dendrimer frameworks by the steps of:

reacting triethylene glycol separately with ethyl diazoacetate and benzyl chloride to separately yield an ester and benzyl ester of the formula

wherein R is CO₂Et or benzyl;

converting a free hydroxyl of the ester to an amine;

coupling the amine with nitritis (acid chloride) and subsequently reducing the nitro group to form an aminotriester;

forming a dendrimer core by reacting ~~triacid~~

with the amine; and

performing selective ester hydrolysis of the core followed by coupling of a monomer of the formula

thereby yielding a first generation dendrimer.

5. (Currently amended) A method of yielding ~~making~~ dendrimer frameworks by the steps of:

reacting triethylene glycol separately with ethyl diazoacetate and benzyl chloride to separately yield an ester and benzyl ester of the formula

wherein K is CO₂Et or benzyl;

reducing a triacid of the formula

by treatment with acetyl chloride to convert the benzyl to a mesylate and a reaction triol;

reacting the mesylate with pentaerythritol to form a product and reducing the product to yield a core of the formula

; and

deprotecting an acetyl moiety on the triacid, transforming the moiety to a mesylate and attaching to the core thereby forming ~~forms~~ a first tier polyether dendrimer.
